

New Methodology for Hematology Testing
Changes in Reported Parameters

Effective November 14th, 2023, DMC University Laboratories will be implementing a new Hematology testing methodology. This change will involve the following updates:

1. Reporting a 5-part automated differential, as appropriate.
2. Discontinuation of in-house testing of the immature platelet fraction (IPF).
3. Automated differentials can no longer be performed on White Blood Cell counts that are less than or equal to 0.7×10^3 K/cumm due to limitations from the new technology.
